

The U.S. Export-Import Bank Equals U.S. Jobs

The Ex-Im Bank supports thousands of U.S. jobs across the country.

- The Ex-Im Bank supports 6,390 jobs per \$1 billion in exports. Since 2009, the Ex-Im Bank has assisted in creating or sustaining more than 1.2 million U.S. jobs by supporting \$188 billion of exports.
- In FY 2013, Ex-Im loans and guarantees supported 205,000 U.S. jobs at thousands of U.S. companies.
- However, if you count the tens of thousands of U.S. suppliers and their employees who rely on selling to global exporters, the impact is even greater.

American manufacturers large and small, and at all levels of the supply chain, rely on Ex-Im Bank financing to do business in the global economy.

- One in three manufacturing jobs rely on exports.
- When Congress votes to reauthorize Ex-Im Bank, that will be a vote to decide whether we want products made in the USA to compete on a level playing field and whether we want U.S. companies to win sales overseas. A vote against Ex-Im Bank is a vote against U.S. manufacturing and jobs.
- Since 2009, small business Ex-Im authorizations have accounted for at least 85% of the Bank's total authorizations.

The Ex-Im Bank supports local jobs in all 50 states, and right in your backyard.

- In Texas, the Bank supports over \$21 billion in exports at 1,344 companies that support nearly 136,000 jobs in the Lone Star State.
- In South Carolina, the Bank supports over \$1.2 billion in exports at 55 companies providing job creation and security for almost 7,900 Palmetto State workers.
- The Bank supports more than \$4 billion in exports throughout the state of Florida. This helps 171 companies provide secure employment to nearly 27,000 Floridians.
- California exporters have used Ex-Im services to support nearly \$22 billion in exports from over 950 businesses state-wide. This supports 134,000 jobs in the Golden State.
